### ***Allowable Subject Matter***

3. Claims 4-5, 9-11 are allowed.

4. The following is an examiner's statement of reasons for allowance: Applicants teach a method of decoding a sound signal comprising the steps of; selecting a stream, which includes a plurality of frames, in which each frame contains a plurality of frames, in which each frame contains information about a segment of the sound signal independent of other segments and the frames are subdivided into n streams,

generating sine waves for each segment of the sound signal for which a corresponding frame is present in the selected stream, which sine waves are based on the information in the corresponding frame, and generating sine waves for each segment of the sound signal for which no corresponding frame is present in the selected stream, which sine waves are based on the information in the streams corresponding to a segment selected from a segment immediately preceding and a segment immediately following the respective segment, thereby reconstructing the sound signal. The cited prior art alone or in combination does not fairly suggest or disclose the claimed combination of features.
